Excellent patient care, together

The Gynaecology Multidisciplinary Team

The Gynaecology Multidisciplinary Team (**MDT**) plans and delivers your treatment, or if there is no treatment actively monitors your care.

Your investigations and treatment will vary depending on your particular circumstances. When you have read this guide, please ask the team about any questions you have.

Your future appointments will be at Watford General Hospital, St Albans City Hospital or Mount Vernon Hospital.

What investigations and tests may be needed?

You may already have had some investigations, but you may need more to give the team as much information as possible to ensure you have the most appropriate treatment.

Common tests include:

- Blood test (ca125) and other blood tests
- Ultrasound scan (pelvic and/or transvaginal)
- Hysteroscopy (camera inside the womb and a tissue sample)
- Magnetic Resonance Imaging (MRI) scan
- Computed Tomography (CT) and Bone scans
- EUA (examination under anaesthetic)
- Biopsy (tissue samples)

This is a specialist team of health professionals which includes:

- A consultant surgeon – who specialises in gynaecology surgery,
- A medical oncologist – a consultant doctor who specialises in chemotherapy treatment,
- A clinical oncologist – a consultant doctor who specialises in radiotherapy treatment,
- Macmillan clinical nurse specialist – a specialist nurse who provides advice, information and support,
- A radiologist – a consultant doctor who specialises in examining scans and X-rays,
- An histopathologist – a consultant doctor who specialises in examining tissue samples in a laboratory.

The Gynaecology Cancer Multidisciplinary Team (MDT) meets every week on a Wednesday from 2pm- 4:30pm. During this meeting, the Gynaecology team will discuss your case and your test results and decide on the most appropriate treatment options for you.

Following this meeting, you will attend a clinic appointment with a member of the team and the options will be discussed with you to allow you to make an informed choice.

The next step

Once you have a gynaecology cancer diagnosis the treatment may include some or all of the following:

- Surgery – robotic/laparoscopic hysterectomy/abdominal hysterectomy
- Chemotherapy /immunotherapy – administered at Mount Vernon Hospital (intravenously or tablet format)
- Radiotherap – this treatment is done at Mount Vernon Hospital
- Hormone Treatment (this will be discussed with your consultant).

What information and support is available?

The clinical nurse specialist (CNS) is your key worker during your investigations and treatment at the hospital.

The key worker is the person who you can contact directly to talk about your care and treatment. There is a team of Clinical Nurse Specialists who provide the key worker role. They are specially trained in gynaecology cancers and offer a holistic assessment with advice, emotional support and information to patients and their families.

Your key worker will make sure that you have written information about the type of cancer you have and treatment you may need. Some of this information will be booklets produced by national cancer organisations which have been approved by cancer charities and patients' organisations. Your key worker can advise you about benefits that may be available for you and about free prescriptions for cancer patients.

The Clinical Nurse Specialists (CNS) in your team are:

Avril Godley and Caroline Bulley

Telephone: 01923 436 371

Mobile: 07747 865 639

(Monday to Friday excluding bank holidays)

Gynaecology Consultants
